#### NOTE

#### Distribution of *Xylosandrus germanus* (Blandford) (Coleoptera: Scolytidae) in Maryland

Weber and McPherson (Great Lakes Entomol. 15:172–174, 1982) state that *Xylosandrus germanus* (Blandford) is apparently not established in Maryland. Specimens in the collections of E. J. Ford, USDA APHIS, and C. L. Staines, Jr. provide the following Maryland records:

Anne Arundel County: Edgewater, 1 May 1982; Gambrills, 28 June 1976. Baltimore City: Leakin Park, 11 May 1976, off beech (*Fagus* sp.) and dead *Carpinus* sp. Baltimore County: Butler, 25 April 1976, off sassafras (*Sassafras albidum*); Granite, 18 April 1973, off *Pinus* sp. Somerset County: Shelltown, 10 May 1969, from sugar trap. Talbot County: Wittman, 25 May 1974.

These records show that *X. germanus* is widely distributed in Maryland. The collection from Shelltown shows that *X. germanus* was established in Maryland before the 1971 detection at the port of Baltimore to which Weber and McPherson (1982) referred.

Specimens have been deposited in the U.S. National Museum.

C. L. Staines, Jr., 3302 Decker Place, Edgewater, Maryland 21037.
